

PROGRAM 4: WRITE A PROGRAM IN MATLAB TO FIND OUT THE FUNCTION USING SIGNAL FLOW GRAPH AND MASON GAIN FLOW

THEORY:

SIGFLOW solves Signal Flow Graph by matrix modeling and matrix inversion.
SYS=SIGFLOW (Q, P) calculates the system transfer function starting from the

$$sys=X/U=inv(I-Q)*P$$

This method can be applied to different courses that deal with computer algebra in different courses, people use different methods to describe the system.

PRETTY Pretty print a symbolic expression. **PRETTY(S)** prints the symbolic expression in a format that resembles type-set mathematics.

Q =

```
[ 0, 0, 0, 0, 0, 0, 0, 0]
[ 1, 0, -1, 0, -1, 0, 0, 0]
[ 0, 0, 0, 0, 0, 0, 0, 0]
[ 1, 0, 1, 0, -1, 0, 0, 0]
```

**PROGRAM 4: WRITE A PROGRAM IN MATLAB TO FIND SIFT :
FUNCTION USING SIGNAL FLOW GRAPH AND MASON GAIN :**

THEORY:

SIGFLOW solves Signal Flow Graph by matrix method and calculates the system transfer function. **SYS=SIGFLOW (Q, P)** calculates the system transfer function. $sys = X/U = inv(I-Q) * P$

This method can be applied to different courses that deal with signal flow graphs. In different courses, people use different methods to draw the signal flow graphs. **PRETTY** Pretty print a symbolic expression. **PRETTY** is a pretty printer that prints a format that resembles type-set mathematics.

Q =

```
[ 0, 0, 0, 0, 0, 0, 0, 0]
[ 1, 0, -1, 0, -1, 0, 0, 0]
[ 0, G1, 0, 0, 0, 0, 0, 0]
[ 1, 0, 1, 0, -1, 0, 0, 0]
[ 0, 0, 0, G2, 0, 0, 0, 0]
```
